

Every SFX-Instrument of this collection contains 61 original sound effects.

Energy 360 RUMBLES

Rumbles SFX-Instrument is another unique concept specially developed for easy sound design. This instrument contains 61 original sounds and textures of rumbles used for anything coming out from space or for earthquakes, machineries, room control, engine rooms and so on. So get ready to rumble.

The «Rumbles SFX-Instrument» contains 61 original long samples distributed from C1 to C6 keys. By activating the "Select Midi" button, each key will bring up its own "Main Control". You will have the opportunity to change the sound settings for each sample. For example by pressing the C2 key, the Rumble-13 sample bring up it own «main control». You can now adjust the Tune, EQ, Volume, Filter, etc. without altering the other sounds that are on the other keys.

Surround panner

There are many «workers» inside the heart of Rumbles. Three LFOs are work together with the Surround panner and randomly assigned to angle, «Y» and distance to produce a surround sound effect that comes from all sides.

Now mix it! By combining different rumbles sound effects among themselves, it offers you the possibility to hear many other original sounds.

Overview:

- Rumbles SFX-Instruments
- 61 original samples
- 24 bit / 96kHz - Stereo wav format
- Surround panner configuration (SP) (L-R-Ls-Rs-C-LFE)
- Kontakt 4.2.4+
- Logic EXS24 (Stereo)

Installation:

KONTAKT:

There are no special installation to use this product. Just unzip and copy the entire folder of the instrument to the place that suits you. You must maintain the organizational structure within the file of the instrument. This is very important for the smooth operation of the instrument. Kontakt 4+ users can enjoy the UI using the automation features of Kontakt. Kontakt 3 is not support.

EXS24:

Unzip the file and copy the entire folder from instrument to ~ / Library / Application Support / Logic / Sampler Instruments / as recommended in the manual for Logic Pro.

The Main Control Panel can simply access directly and quickly to important parameters of each of the 61 groups of the instrument.

UI Controls

Main Control Panel

The Main Control Panel is the heart of SFX Instruments (Kontakt Version 4+) and is composed of knobs that affect parameters such as volume, panorama and "tune". It also includes controls of the envelope, equalizer and filter. The Main Control Panel is assigned to each of the sixty-one keys of an SFX-Instrument by the «MIDI Select» button (or pop-up groups list) making it a «super SFX-Instrument» combining sixty-one Control Panels totally independent. Each of the keys will have its own settings in memory (Vol, Pan, Tune, Eq, Env, Filter). In addition, to ensure maximum control and speed, the Main Control Panel allows you to control its parameters in realtime from outside of Kontakt for example using the automation system of your sequencer or data generated by an external MIDI controller, you will have the opportunity to easily select and assign (or remove) the sources of appropriate automation.
